

GPR7500 Glue Puller

Paintless
Dent Removal

**The most efficient way to remove dents
without damaging the paint**

**PDR
Made
Easy!**

**GPR7500 Glue Puller
Complete System**

- Lightweight dual lever dent puller
- Two sizes of pulling knobs

- Specialized glue
- Nylon knockdown to finish the work
- Professional glue gun

The GPR7500 Glue Puller is designed to let you lever out dents from the panel surface without damaging the paint.

No holes to drill and no interior panels to be removed.

Works on panels where conventional tools will not reach.

No limitations by unseen restrictions behind the panel.

Units may not be exactly as shown and are subject to change without notice.

GPR7500 Glue Puller

Paintless
Dent Removal

Four easy-to-follow steps to remove dents

1 Using a contrast light, identify the exact size and shape of the dent. Glue the pulling knob to the lowest spot in the dent, using the special Glue Puller Hot Melt Glue.

2 Attach the Glue Puller to the pulling knob and lever out the dent by applying a squeezing action to the levers. The dent can be progressively levered, applying only as much force as is necessary. Larger dents may require several pulls.

- Great for PDR specialists wishing to reduce their repair time
- Great for shop owners or bodymen wishing to keep PDR work in-shop
- Made from lightweight, durable aluminum
- Dual lever action for even weight distribution while pulling
- Large protective feet adjust to the contours of the panel surface
- Nylon knock down will not mark the paint surface

3 The dent is initially slightly over pulled. The high spot is then carefully tapped down using the knock down and a composite-type hammer.

4 The finished result is a like-new panel, without drilling holes or stripping out the interior. The Glue Puller works great on door dings, baseball hits, etc.
